

Project Specification: Portfol.io

Product Backlog

- User / Recruiter Sign Up
 - The registration functionality and landing page that should let both users and recruiters sign up to the page and populate basic information about themselves.
- User Experiences Content Editing
 - A private page where users should be able to edit their Portfolio content and add new Sections, new Experiences to each section or edit existing content.
- User Portfolio Portfolio Page
 - The main, publicly-accessible user portfolio page that highlights their experiences and achievements.
- Recruiter Resume Stack Creation
 - Recruiters should be able to create what we call “resume stacks” which are essentially a collection of interested profiles akin to a stack of paper resumes in a career fair.
 - Upon creation of a resume stack, recruiters should get a link that they can share so that people can submit their profiles to the stack.
- Recruiter Resume Stack Filter/Sort
 - Once users have pushed their resumes to recruiter-generated stacks, recruiters who are assigned as admins for the stack should be able to filter user portfolios by certain criteria and sort them from the submission stack to “definite” and “maybe” groupings.
- User Resume Stack Submission
 - Given a link to a resume stack, users should be able to add their profiles to the stack.
- Global User Lookup
 - A search bar with functionality to look up users by experiences, skills, level of education, school, etc.
 - This should be available to both users and recruiters.

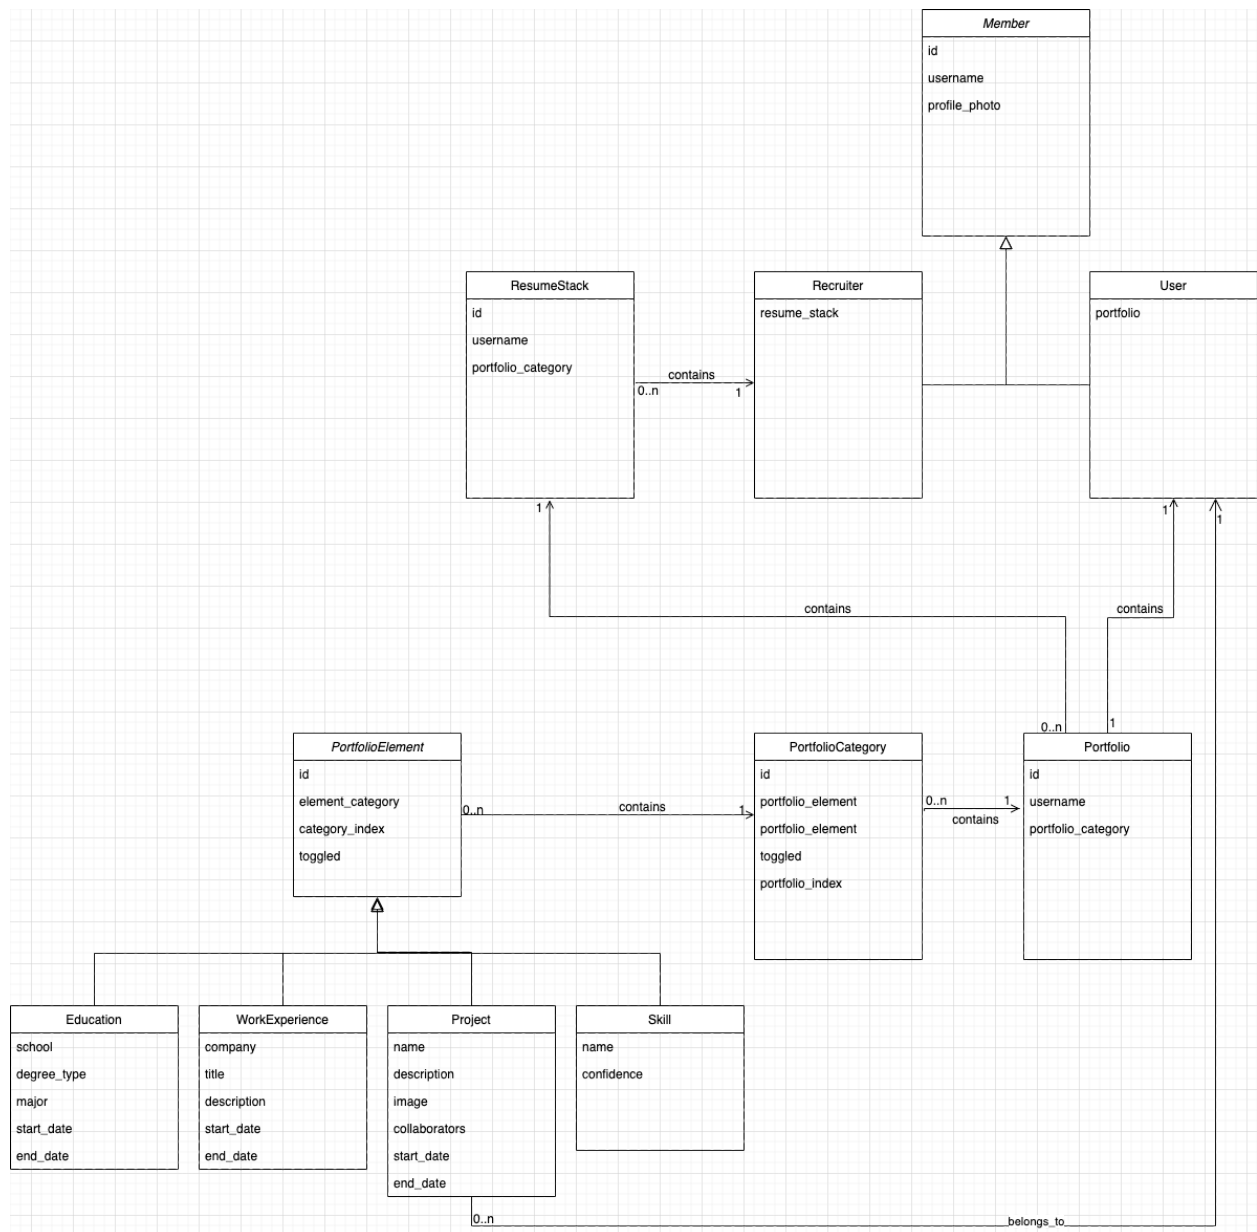

Sprint 1 Backlog

Owner: Diego [diegom]

- Diego's Backlog
 - User/Recruiter sign-up landing page and functionality
 - Further refine user profiles with Javascript animations, more customization options, and a richer interface with visual elements enriching project descriptions.

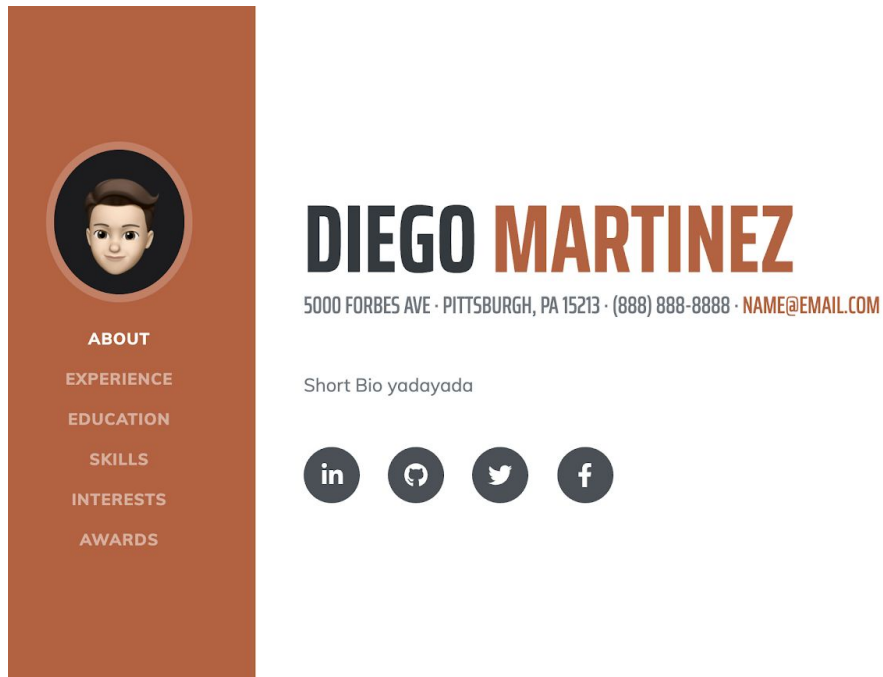

- Transfer experimental portfolio work to Django and template html so that it connects with SQL backend.
- Ike's Backlog
 - Port UML data models into Django model format & recompile class diagram
 - Set up Portfolio generation forms and templates for collecting user data to display and saving in the SQL backend DB

Application Data Models

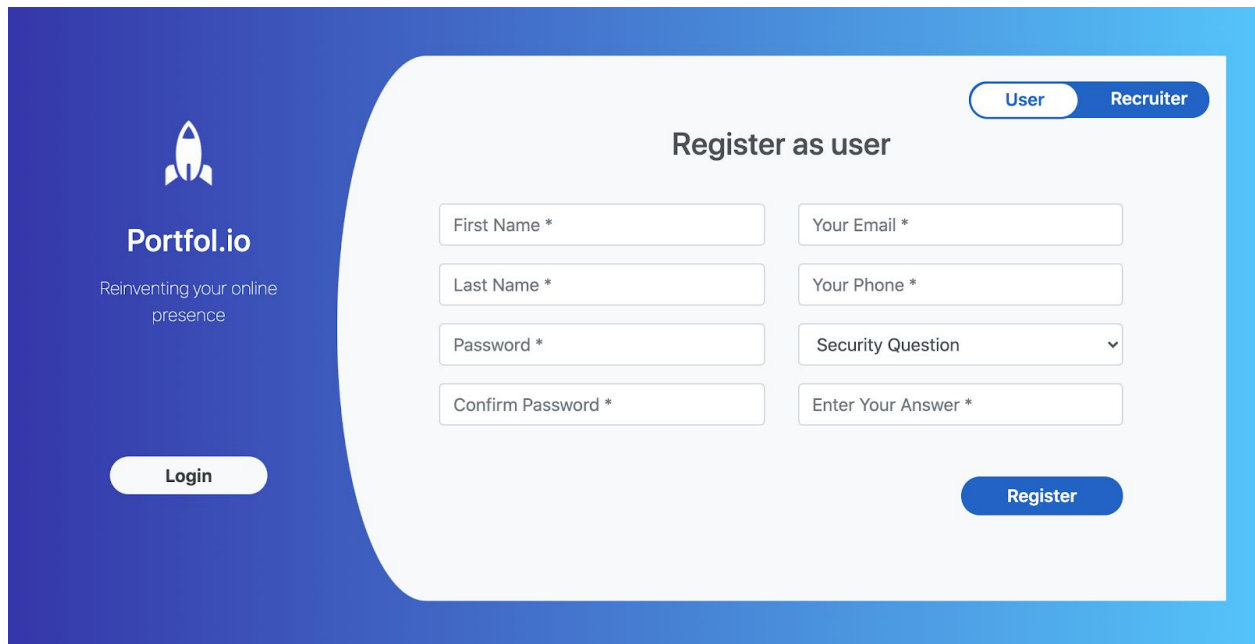

Wireframes/Mockups

- Sample Portfolio Page [using online bootstrap template], will change throughout Sprint 1]

- Sample Sign-up Page (forked from online template, not final design)

- Resume Stack Creation [TBD]
- Resume Stack Sorting/Filtering [TBD]
